G protein-coupled receptor CKR-L1 - human
N.Alternate names: Chemokine receptor-like protein TER1; GPR-CY6
S.Accession: Sapiens (man)
C.Accession: JCS067; G0276; G02387
C.Accession: JCS067; G02776; G02387
C.Accession: JCS067; G02776; G02387
C.Accession: JCS067; G02776; G02387
C.Accession: JCS067; G027776; G02387
C.Accession: JCS067; MUD:97040707; PMID:8886020
A.Title: Molecular cloning and RNA expression of two new human chemokine receptor-like standerne number: JCS067; MUD:97040707; PMID:8886020

-!- FUNCTION: High affinity receptor for activated thrombin coupled G proceins that stimulate phosphoinositide hydrolysis.
-!- FUM. A proteolytic cleavage generates a new amino terminus that functions as a tethered ligand.
-!- SIMILARITY: BELONGS TO FAMILY 1 OF G-PROTEIN COUPLED RECEPTORS.
                                                                                                                                                                                                                                                                  F2R OR PAR1. G proteins that stimulate phosphoinositide hydrolysis.
-!- SUBCELLULAR LOCATION: Integral membrane protein.
-!- PTM: A proteolytic cleavage generates a new amino terminus that functions as a tethered ligand.
-!- SIMILARITY: BELONGS TO FAMILY 1 OF G-PROTEIN COUPLED RECEPTORS.

```
FUNCTION: High affilinty receptor for activated thrombin coupled to G proteins that stimulate phosphoinositide hydrolysis. May play a robe in platelets activation and in vascular development.

SUBCELLULAR LOCATION: Integral membrane protein.

TISSUE SPRCIFICITY: PLATELETS AND VASCULAR ENDOTHELIAL CELLS.

FTM: A proteolytic cleavage generates a new amino terminus that functions as a tethered ligand.

FTM: Phosphorylated; probably mediating desenzitisation prior to the uncoupling and internalization of the receptor.

SIMILARITY: BELONGS TO FAMILY 1 OF G-PROTEIN COUPLED RECEPTORS.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           'Characterization of single-nucleotide polymorphisms in coding regions

by its extracellular surface.";
                                                                                                                                                                                                                                                                                                      -!- FUNCTION: High affinity receptor for activated thrombin coupled G proteins that stimulate phosphoinositide hydrolysis.
-!- SUBCELLULAR LOCATION: Integral membrane protein.
-!- PTM: A proteolytic cleavage generates a new amino terminus that functions as a tethered ligand.
-!- SIMILARITY: BELONGS TO FAMILY 1 OF G-PROTEIN COUPLED RECEPTORS.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              BY SIMILARITY.

PHOLICIAN: RECEPPTOR FOR EXTRACELLULAR AIP, UTP, CTP, GTP AND ITP.
THE ACTIVITY OF THIS RECEPPOR EIGHDIATED BY G PROTEINS WHICH
ACTIVATE A PHOSPHATIDYLINOSITOL-CALCIUM SECOND MESSENGER SYSTEM.
MAY PLAY A KEY ROLE IN THE BARLY DEVELOPMENT OF NEURAL TISSUE.
SUBCELLULAR LOCATION: INTEGRAL MEMORANE PLOCESIN.
SUBCELLULAR BOLONGS TO PAMILY 1 OF G-PROTEIN COUPLED RECEPTORS.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Xenopus laevis (African clawed frog).

Eur. J. Immunol. 28:582-588(1998).

-!- FUNCTION: Receptor for the chemokines SCYA1/I-309, SCYA4/MIP-1-beta and SCYA1/TARC. May regulate monocyte chemotaxis and thymic cell line apoptosis. Alternative coreceptor with CD4 for HIV-1
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the co

This response is mediated via a G-protein that activates a phosphatidylinositol-calcium second messenger system (By similarity).
SUBCELLULAR LOCATION: Integral membrane protein.
SIMILARITY: BELONGS TO FAMILY 1 OF G-PROTEIN COUFLED RECEPTORS.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Takasaki J., Kamohara M., Saito T., Matsumoto M., Matsumoto S., Ohishi T., Soga T., Matsushime H., Furuichi K.; "Characterization of cloned rat and porcine cysteinyl leukotriene

FUNCTION: HIGH AFFINITY RECEPTOR FOR THE C-C TYPE CHEMOXINES
TARC/SCYAL7 AND MDC/SCYA22. THE ACTIVITY OF THIS RECEPTOR IS
MEDIATED BY G(1) PROTEINS WHICH ACTIVATE A PHOSPHATIDYLINOSITOL-
CALCIUM SECOND MESSENGER SYSTEM. CAN FUNCTION AS A CHEMOATTRACTANT
MONING RECEPTOR ON CIRCULATING MEMORY LYMPHOCYTES AND AS A
CORECEPTOR FOR SOME PRIMARY HIV-2 ISOLATES. IN THE CNS, COULD
MEDIATE HIPPOCAMPAL-NEURON SURVIVAL.

(CURA-) CURAGEN CORP.

Kekuda R; Smithson G, Ellerman K, Edinger SR, Muralidhara P; Casman SJ,

2002-643487/69. N-PSDB; ABS64723 New isolated G protein coupled receptor polypeptides and polynuclectides, useful in gene therapy, particularly for treating preventing cardiomyopathy, atherosclerosis, diabetes, multiple preventing cardiomyopathy, atherosclersclersclersclers; Crohn's disease or cancer

Claim 1; Page 98; 252pp; English.

This invention relates to a new isolated G-protein coupled receptor

(GPCRX) polypeptide, GPCRX nucleic acid and an antibody specific to the protein

are useful for treating, preventing or alleviating a GPCRX-associated

disorder or a pathological state in a subject, particularly a human. In

particular, the disorder is cardiomyopathy, atherosolarosis, diabetes,

constitution. The GPCRX polypeptide and nucleic acid are also useful for

disporder related to cell signal processing and metabolic pathway

consideration. The GPCRX polypeptide and nucleic acid are also useful for

disponsing the presence of or predisposition to a disease associated

with altered levels of GPCRX, particularly cancer. The GPCRX nucleic

acid and polypeptide are especially useful in the manufacture of a

medicament for therapeutic or prophylactic applications for disorders

associated with aberrant GPCRX expression or activity, e.g. von

Hippel-Lindau syndrome, Alzheimer's disease, Huntingron's disease,

sclerosis, Mypercalcaemia, Parkinson's disease, tuberous

contaxia-telangicctasia, leukodystrophies, addiction, anxiety, depression,

creebral palsy, epilepsy, Leech-Wyban syndrome, multiple solerosis,

ataxia-telangicctasia, leukodystrophies, addiction, anxiety, depression,

creebral palsy, cpilepsy, Leech-Wyban syndrome, multiple solerosis,

ataxia-telangicctasia, leukodystrophies, addiction, anxiety, depression,

creabral palsy, chinal, bacterial in proteomin, autoimmune disease,

creabral palsy, bacterial or protocoral infections, or graft-versus

chost disease, The DNA encoding the protein is useful in gene therapy

con treating the above conditions. The polypeptides can be used as

condition, preventive medicine, and pharmacogenomics. These are also useful

in developing powerful asay system for functional manysis of various

them disease, as well as in diamospic applications. The present human disorders, as well as in diagnostic applications. The present sequence represents a human G protein coupled receptor related protein sequence represents a hu (GPCR) of the invention

Novel nucleic acids and polypeptides for diagnosis, treatment of inflammatory, autoimmune, nervous system, myeloid or lymphoid cell disorders, cancer and promoting wound healing -

Claim 10; Page 600; 672pp; English.

regeneration of bone, cartilage, tendon, ligament and/or nerve tissue growth, tissue repair, healing of burns, incisions ulcers, treatment of desceptorais, osteoarthritis, bone degenerative disorders and periodontal disease. The sequences of the invention are also useful for gut protection or regeneration and treatment of lung or liver fibrosis, reperfusion injury in various tissues, immune deficiencies and disorders including severe combined immunodeficiency (SCID), bacterial or fungal infections, autoimmune disorders e.g. multiple sclerosis and myasthenia gravis, allergic conditions such as asthma, thrombolysis or thrombosis and coagulation disorders. Sequences ABG66666-ABG66758 represent human novel polypeptides of the invention. The invention relates to human novel polynucleotides and associated polypeptides. The polynucleotides and polypeptides are useful for treating inflammatory conditions such as arthritis, nephritis, Crohn's disease, ischaemia-reperfusion injury, shock, sepsis, immune responses and cancer and for promoting wound healing. The sequences are used to brain tissue, and are useful for the treatment of central and peripheral nervous system diseases and neuropathies, such as Alzheimer's disease, Parkinson's disease and neuropathies, such as Alzheimer's disease, sclerosis. The sequences are involved in chemotactic or chemokinetic activity, regulation of haematopolesis, treatment of myeloid or lymphoid cell disorders and platelet disorders such as thrombocytopenia.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             the inventoring transfer to isolated polymerecide [1] and and polymetrase chain reaction (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of [11]. The polymuclectides are also used in diagnostics as expressed sequence tags for identifying expressed genes. [1] is useful in gene therapy techniques for identifying expressed genes. [1] is useful in gene therapy techniques to restore normal activity of [11] or to treat disease states involving [11]. [11] is useful for generating antibodies against it, detecting or quantitating a polymeptide in tissue, as molecular weight markers and as a food supplement. [11] and its binding partners are useful in medical modes of sizes expressing [11]. [11] and [11] are useful for treating disorders involving aberrant protein expression or biological activity. The polypeptide and polymucleotide sequences have applications in responsible for genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and among acid sequences. ABG0010-ABG30377 represent novel human and amno acid sequence data for this patent did not appear in the printed specification, but was obtained in electronic format directly from WIPO

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      셤
                      The invention relates to novel isolated nucleic acid molecules encoding of protein-coupled receptors termed nGPCR-x. nGPCR-x polymucleotides, opolypeptides, and modulators may be used in the treatment of diseases and conditions such as infections, much as viral infections caused by HIV-1 (human immunodeficiency virus) or HIV-2, pain, cancers, metabolic and cardiovascular diseases and disorders (e.g., type 2 diabetes, obesity, anorexia, hypotension, myocardial infarction, anorexia, hypotension, miscass, and psychotic and neurological disorders, including schizophrenia, migraine, major depression, anxiety, mental disorder, manic depression, and diseases, and psychotic and neurological disorders, including schizophrenia, migraine, major depression, anxiety, mental disorder, manic depression, and major other diseases and syndromes listed in the specification.

CC modulators, may also be used in diagnostic assays for such diseases or conditions. The present sequence represents a G protein-coupled

Sequences AAU25554-AAU255616 represent human G-protein coupled receptor. (GPCR) polypeptides of the invention. The proteins and their associated DDNA sequences can be used to identify compounds which bind to GPCR polypeptides and in screening for compounds that modulate GPCR activity. By screening a human subject for the presence of mutations in GPCR DNA, a GPCR-related disorder or a genetic predisposition can be diagnosed. The sequences can also be used for treatment and prevention of mental disorders such as schizophrenia, attention deficit disorder, anxiety, depression, dementia and bipolar disorder, neurological disorders such as huntington's disease and Tourette's syndrome, metabolic disorders such as obesity, anorexia and type 2 diabetes, cardiomyopathy and atherosclerosis, viral infections caused by HIV and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Gaps
                                                                                                                                                                                                                  New isolated nucleic acid encoding a new G-protein coupled receptor polypeptide for detecting receptor modulators that can treat mental disorders, such as schizophrenia, anxiety, depression, or obesity -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Drosophila; developmental biology; cell signalling; insecticide;

The polypeptides are useful for polypeptides are useful for determining the presence of or predisposition to a disease associated with altered levels of polypeptide. The polypeptides are also useful for identifying agents (agonists and antagonists) that bind to them. Cells expressing the proteins are useful for identifying at the appentic agent for use in treatment of a pathology related to aberrant expression or
                                                                                                                                                                                    from WIPO
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  range of human polypeptides, useful in genetic

The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention is useful in developmental biology and in elucidating cell signalling and cell.-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical furge. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL01840-ABL16175) and the encoded proteins
physiological interactions of the polypeptide. Vectors comprising the nucleic acids encoding the polypeptides and cells genetically engineered to express them are also useful for producing the proteins are useful in genetic vaccination, testing and thereby, and can be used as nutritional supplements. They may be used to increase stem cell proliferation; to regulate haematopoiesis; and in bone, cartilage, tendon and/or nerve tissue growth or regeneration; immune suppression and/or stimulation; as anti-inflammancry agents; and in treatment of leukaemias. ANUSDSIO-AAU33304 represent the amino acid sequences of novel human secreted proteins of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       sequence data for this patent did not form part of the printed scification, but was obtained in electronic format directly from WIPO ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           New isolated nucleic acid detection reagent for detecting 1000 or more genes from Drosophila and for elucidating cell signalling and cell-cell
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Drosophila; developmental biology; cell signalling; insecticide;
